UNIVERSITY LIBRARY

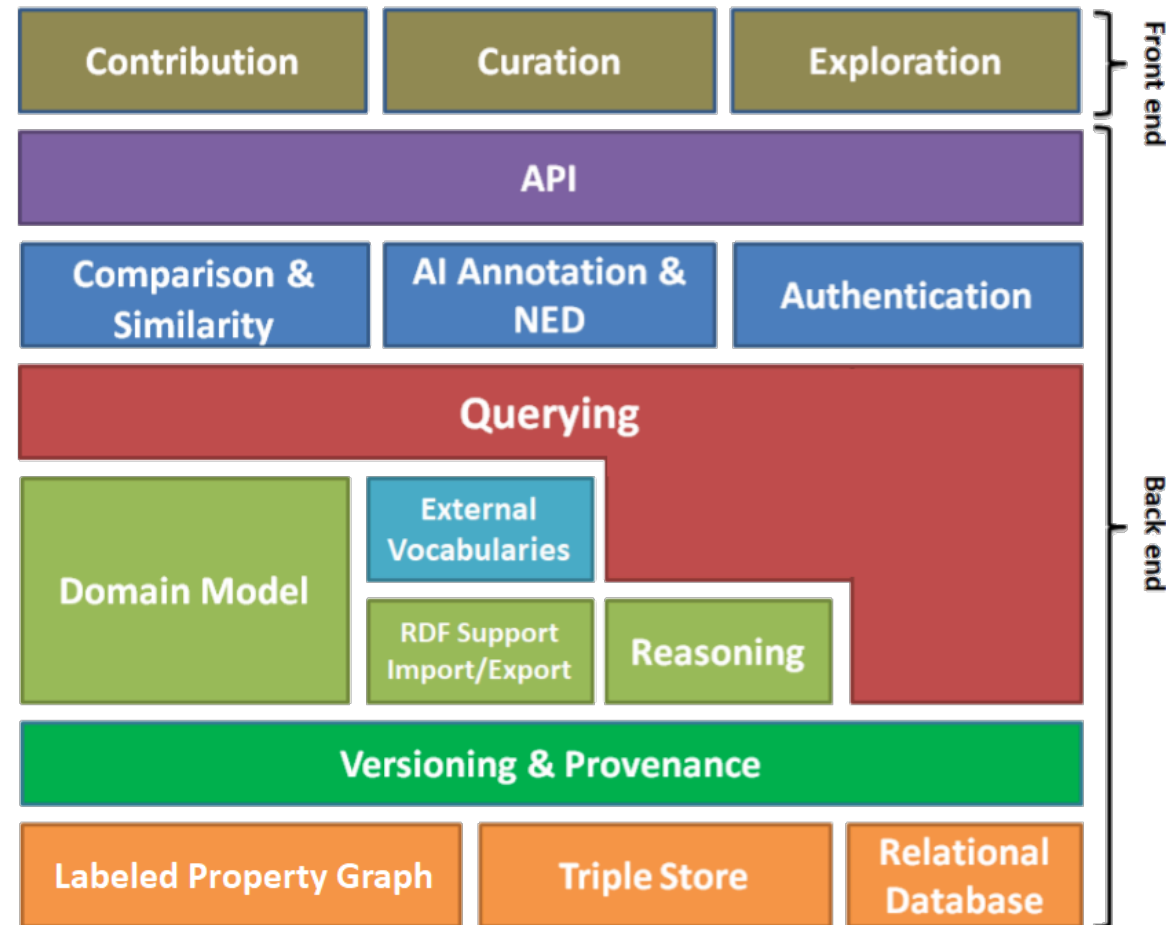

**TIB**

## **ORKG Backend**

Manuel Prinz,  
3rd ORKG Workshop

# What does the general architecture look like?

## Which technology do you use?

- Spring Boot 2 + Spring Framework
- Kotlin programming language
- Persistence:
  - PostgreSQL
  - Neo4j + APOC + Semantics extension
- GitLab for collaboration and CI/CD
- Docker for Development and Deployment

## What does the data model look like?

- RDF-like data model
- Challenge: provenance information
  - Statements need to be referenced
  - Storage in LPG removes need of reification
- Data model is an implementation detail
  - May change to adopt to new requirements
  - Interaction will happen via UI / REST API / RDF

## What are we currently working on?

- RDF export
  - Data export and SPARQL endpoint
- Single Sign-On
  - OAuth2 with external services, such as ORCID
- Graph History (Versioning)
- Performance improvements and benchmarks

## Graph History (Versioning)

- Record all changes, including provenance information
- Wiki-like history view
- Ability to query any state of the knowledge graph
  - Reproducible queries
  - Possibly roll-back feature?

## Performance Improvements

- Dealing with large datasets
  - How many data can we serve?
  - Where are the bottlenecks? How do we improve those?
  - Which caching / pre-computation strategies might help?
- Performance difference between different technologies
  - LPGs vs. Triple stores
  - Custom data model vs. Neo4j semantics extension data model

# Questions?

## What other features are we thinking about?

- GraphQL interface
- RDF import
- SPARQL interface

---

## Agenda with background image

1. Creating an agenda is always a good idea so that the audience can follow.
  - Here is a sub-item
  - Another sub-item
2. Here you can find a new topic
  - Here is a sub-item
  - Another sub-item
3. Here is a **highlighted** topic
  - With a sub-item
4. Here you can find another topic

## Agenda without background image

## Text slide with headline, which can also run in two lines

Texts are always set in the font Arial and in TIB grey.

**Special statements** can be marked bold and coloured in the TIB red

### Basically, less is more!

- First level: Highlight the text and press the tab key for bulleted text.
  - The bullets are grey boxes.
    - Third level
      - Fourth level
